NOTEWORTHY PROJECTS

NOTEWORTHY

My diploma thesis and my internship: wearables for health, from research to prototype.

Final prototype: bracelet + companion app

NOTEWORTHY · 2025–26

DIPLOMA THESIS

EUFORIA · PANIC-DETECTION BRACELET & COMPANION APP

DPSD, University of the Aegean · Supervisor: Modestos Stavrakis

Sole researcher & designer | Wearables | Digital health | Human-centred design

A wristband and Android app that pick up the early signs of a panic attack and respond with a discreet haptic cue, helping the user regain control in the moment, without anyone else noticing.

PROBLEM SPACE

~10′
for symptoms to peak, so help has to come early

66.7%
of respondents had a sudden episode of intense fear

5.17
average daily stress, out of 10

N=69
survey responses, plus interviews guided by a psychiatrist

INSIGHTS → DECISIONS

Can’t focus at the peak	→ breathing rhythm through vibration, no reading
Discretion matters	→ looks like jewellery, silent haptics
Users want control	→ nothing happens without consent

HUMAN-CENTRED RESEARCH

The process followed human-centred design (ISO 9241-210): a literature review of panic, biosignals and existing products, a 54-question survey, and interviews with people who experience panic attacks.

SEVEN USER NEEDS

- Immediate guidance
- Early warning
- Discretion
- Comfort
- Privacy
- Personalisation
- Context awareness

PERSONAS

ANNA, 26

Architect, Athens

Racing heart before presentations; notices the build-up too late.

EIRINI, 52

Teacher, Patras

Stress from exams and conflict; notices it only once exhausted.

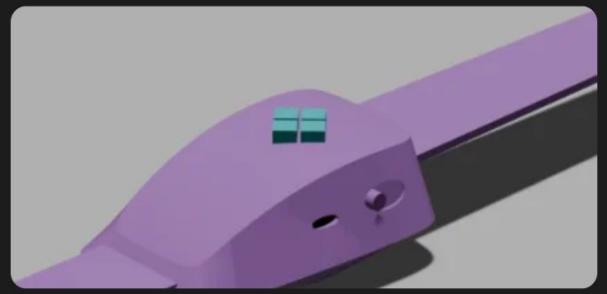

KOSTAS, 38

Delivery driver, Thessaloniki

Anxious in traffic, alone at the wheel; can't look at a phone.

THE BRACELET

Part	Role
ESP32-S3	Microcontroller with Bluetooth LE
MAX30102	Heart rate (PPG)
EDA / GSR	Skin response and sweat
MPU6050	Motion and tremor
Motor + RGB LED	Haptic cue and status light
450 mAh · USB-C	LiPo battery and charging
TPU + PETG	3D-printed soft band, rigid sensor shell

PANIC FLOW IN THE APP

Awareness → Choose a tool → **Breathe 4″ in / 6″ out · CBT · 5-4-3-2-1 grounding** → Summary

TESTING WITH USERS

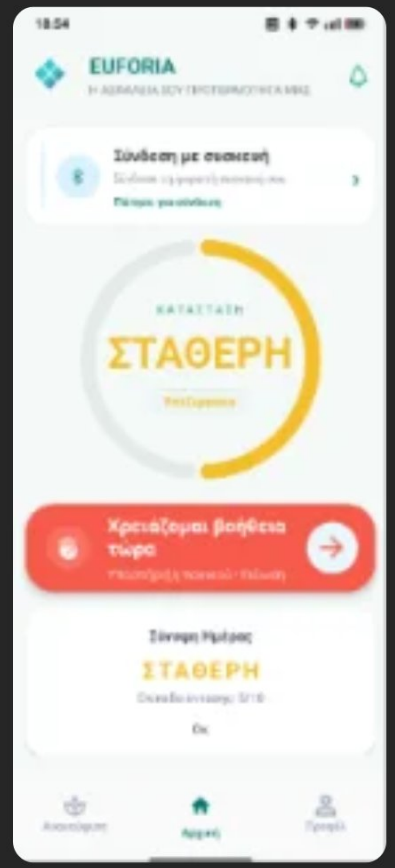

A formative test with 4 users: 35–45 minute think-aloud sessions with the app and the bracelet. The core idea was understood and well received, and the sessions produced specific fixes.

FINDINGS → FIXES

Panic button felt like an emergency	→ clearer name, softer colour
“CBT” and “grounding” read as jargon	→ plain wording
Motion sensor flagged tremor at rest	→ calibrate; combine HR, EDA & motion
One user disliked the vibration	→ adjustable strength and rhythm, or off

NEXT STEPS

- More data
- ML detection & sensor fusion
- Personalisation
- Long-term real-world testing

Companion app: home screen

A design prototype, not a clinically validated system.

NOTEWORTHY · ATRIDE

INTERNSHIP

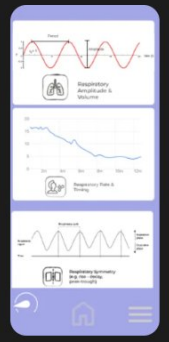

AN ANDROID APP FOR ANASA®, A SMART BREATHING SHIRT

01 Designed and developed the Android app for ATRIDE's shirt that continuously monitors respiratory activity.

02 Followed a standard design process, from requirements and user flows to building the interface in Android Studio.

03 The app retrieves and works with the respiratory data the shirts record, stored in CSV files.

NOTEWORTHY PROJECTS

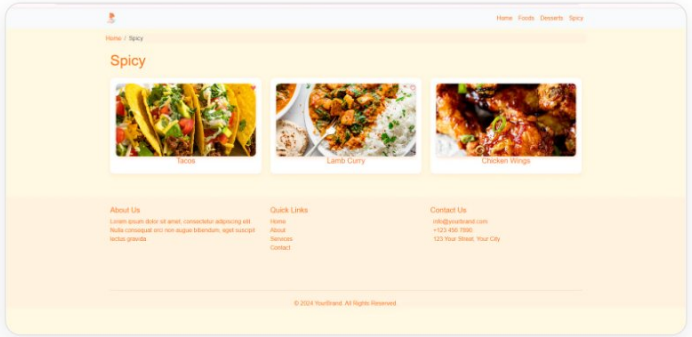

PROJECTS

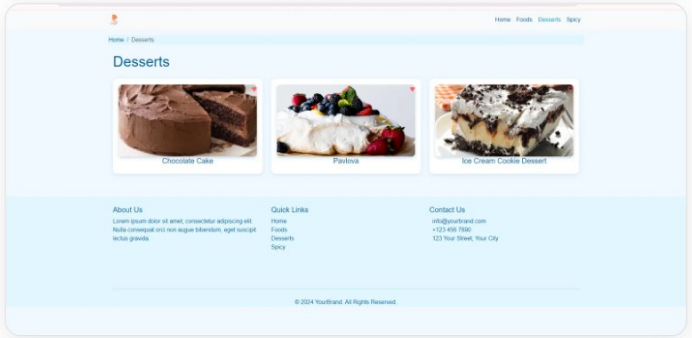

Web, app, graphic and product design, mostly from university work at DPSD.

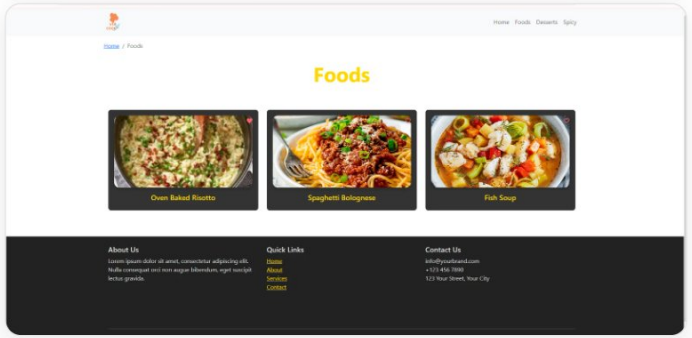

WEB DESIGN

PROJECTS · 01 / 04

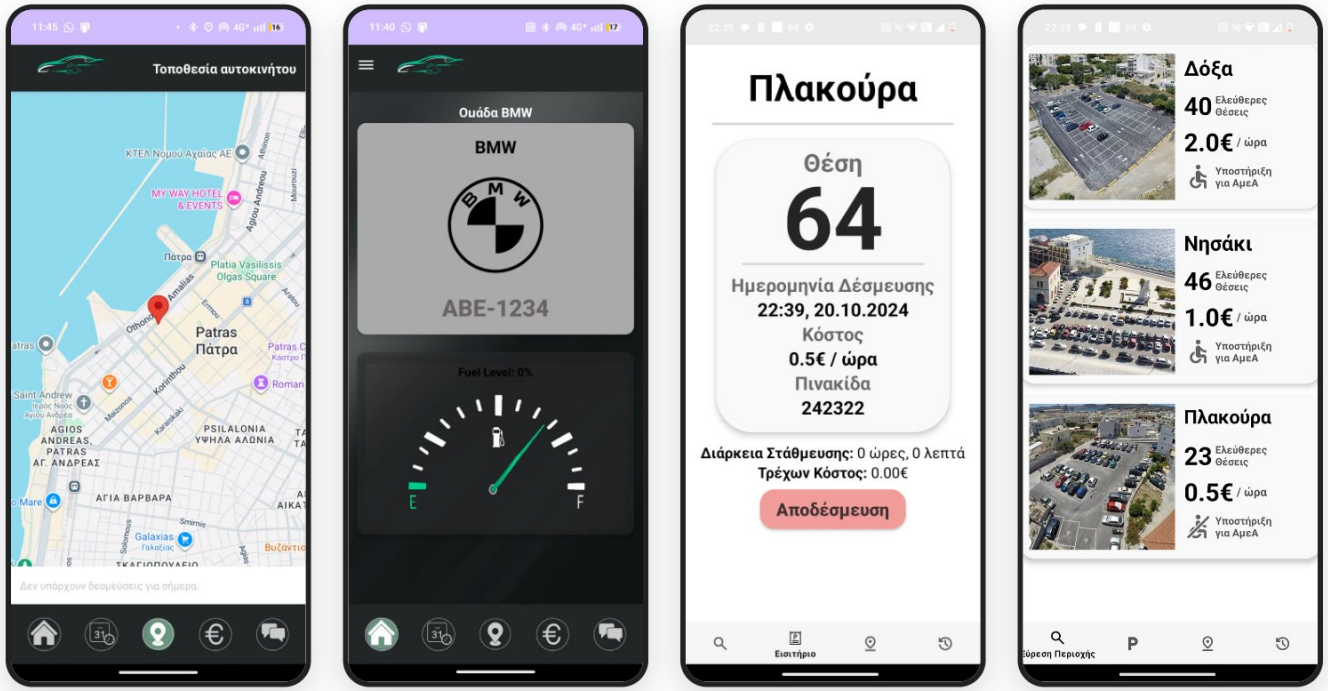

A university assignment website focused on clear structure, usability and functional design.

HTML, CSS and JavaScript for responsive, engaging interfaces.

SQL and database systems to manage data and support more dynamic web solutions.

HTML CSS JavaScript SQL

APP DESIGN

University app projects: a parking app, a friend-finder app and a shared-car platform for groups.

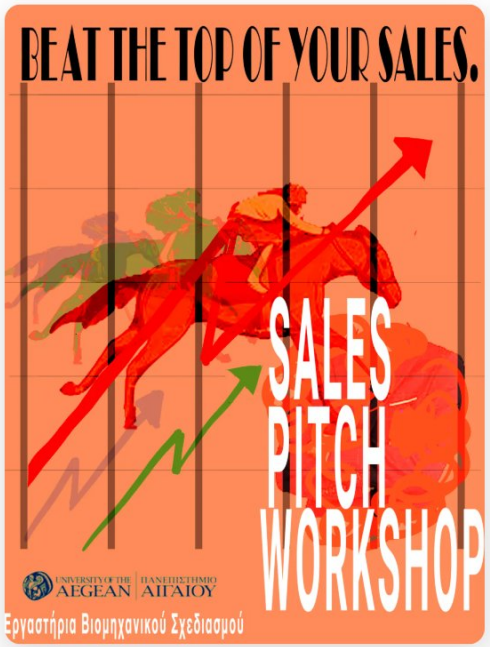

Android Studio with Java and XML for functional, well-structured mobile apps.

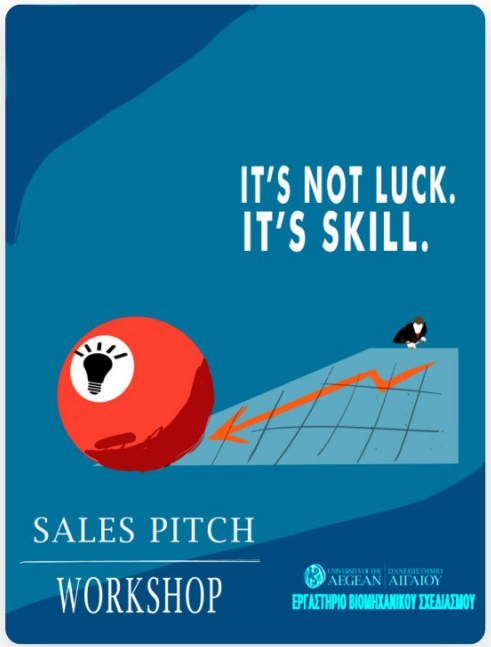

Firebase database and storage for real-time data, user information and app content.

Android Studio | Java | XML | Firebase

GRAPHIC DESIGN

PROJECTS · 03 / 04

Visual work that turns ideas into branding and design that support identity and business presence.

Posters, product concepts and sketch development from university work.

Concept-based designs for digital and print.

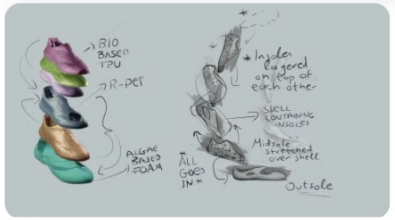

Photoshop

Illustrator

PRODUCT DESIGN

PROJECTS · 04 / 04

3RD

place in Greece with my team in the SHOEDES shoe-design contest (Erasmus+)

Projects that pair mechanical thinking with the design-thinking process, from early ideas to developed concepts.

CAD and 3D tools for product development, digital modelling and visual exploration.

Blender · Creo Parametric

ARGYRIS SERGIANNIS

WHO AM I | I WORK ON

SPECIALIZING IN USER-CENTRIC PRODUCT DESIGN, I CRAFT INTUITIVE, ENGAGING EXPERIENCES THAT BLEND CREATIVITY WITH FUNCTIONAL EXCELLENCE, TRANSFORMING COMPLEX IDEAS INTO ELEGANT, USER-FRIENDLY SOLUTIONS THAT RESONATE WITH PEOPLE.

Product & Systems Design Engineering (DPSD), University of the Aegean · 2026

I WORK ON

WEB DESIGN

Responsive web design and development.

CREATIVE IDEAS

Idea generation, brainstorming and creative solutions.

VISUAL ARTS

Visual design, branding and illustration.

UI/UX FOCUS

UI/UX design, wireframing and prototyping.

TECH & TOOLS

Technical skills, problem-solving and development tools.

TOOLBOX

Figma · Photoshop · Illustrator · Blender · Creo Parametric · Android Studio · Firebase · HTML · CSS · JS · SQL · Arduino IDE
